

BURMESE CATHOLIC COMMUNITY OF WESTERN AUSTRALIA

Website User Flow Guide

A plain-language explanation of how people use the BCC website — and how staff follow each request.

For committee members, administrators, editors, and helpers who are not IT specialists.

Website: <https://bccwac.com>

August 2026

Why this guide exists

The BCC website is more than a brochure. Visitors can ask for help, subscribe for event emails, and read community news. Staff use a private Admin Panel to answer people, publish posts, and manage events. This guide explains each journey in everyday language.

1. Big picture

Think of the website as two connected rooms:

- **Public website** (<https://bccwac.com>) — what visitors and families see: Home, About, Our Work, News & Stories, Our Approach, Get Involved, Events, and Gallery.
- **Admin Panel** (/admin) — private staff area for posts, events, subscribers, enquiries (follow-up queue), reports, and page settings.

Only signed-in staff can open the Admin Panel. Visitors never see staff tools.

2. Who can do what in Admin

Role	Main purpose	Important limits
Owner	Full control, including staff accounts	Creates Administrator and Editor logins
Administrator	Publish content, manage pages, events, subscribers, enquiries, reports	Cannot create or change staff accounts
Editor	Write posts and send them for review	Cannot publish, cannot open Subscribers / Enquiries / Reports, cannot change Public pages

Simple rule

Editors prepare content. Administrators (or Owner) approve and publish. Sensitive community contact lists stay with Administrator / Owner.

3. Get Involved → Follow-up queue

Get Involved is the official public contact form. When someone asks for help, volunteers, or information, their message becomes a staff case in the **Community follow-up queue** (Admin → Enquiries).

Visitor journey

	Open Get Involved Visitor goes to the Get Involved page on the website.
	Fill the form They enter name, contact details, and message, then submit.
	Confirmation on screen The website shows that the message was received and entered the follow-up queue.
	Staff are notified Administrators receive an alert on Telegram and by email (bccwacharity@gmail.com).
	Staff follow up In Admin → Enquiries, staff update status, set a follow-up date, and later mark the case closed.

What staff should do in the queue

- Open each new enquiry soon after the alert arrives.
- Assign a realistic follow-up date if more time is needed.
- Change status as work progresses (for example open → in progress → closed).
- When closing, the system records which staff member closed it.
- Use Reports if you need a combined list of enquiries and subscribers for committee review.

Important

There is no floating “Ask a question” chat on the public site anymore. All formal contact should come through Get Involved so nothing is lost.

4. Subscribers (event email list)

People can join the community mailing list from the **Home** page or the **Events** page. They must tick consent before joining.

Visitor journey

	Find the subscribe box On Home or Events, enter name and email and confirm consent.
	Saved on the list The person is stored as an active subscriber in Admin → Subscribers.
	Welcome email The visitor receives a professional welcome email with website links, Events, About, Facebook group, and info@bccwac.com.
	Staff alert Staff also receive Telegram and Gmail notice that someone subscribed.
	Later event emails When staff publish an upcoming event, active subscribers can receive the event announcement by email.

Staff notes

- Only Owner / Administrator can open the Subscribers list.
- Staff can mark someone as unsubscribed if requested.
- Editors do not manage the mailing list.
- Welcome emails and event emails are sent automatically by the connected automation helper (see Guide 2).

5. Posts (News & Stories)

Posts are community stories, notices, and updates. They only appear on the public website after an authorised person publishes them.

Staff publishing journey

	Create post In Admin → Create post, write the title, summary, and story. Optionally attach photos (up to 4 as one album).
	Save as draft A draft is private. It is not public and does not trigger any outward alerts.
	Send for review Editor (or any staff) can submit the draft for editorial review.

Administrator publishes

Only Administrator / Owner can publish. After publish, the story appears on the website.

Automation may start

Only after publish can distribution automation run. Drafts never go out automatically.

Reputation rule

Do not claim government endorsement, funding, or partnerships unless you have written evidence. Publish carefully.

6. Events

Events appear on the public Events page. Publishing an **upcoming** event can also email the active subscriber list.

Event journey

Create or edit event

Staff enter title, date, time, location, category, and description in Admin → Events.

Keep as draft if needed

Draft events stay private and do not email anyone.

Publish upcoming event

When first published with a date today or in the future, subscribers can receive an event email.

Staff summary

Staff also get a Telegram summary that the event email went out.

No repeat spam

Saving the same already-published event again does not re-send the email.

Past-dated events do not trigger subscriber mail. Always check the date before publishing.

7. Quick map: visitor action → staff place

Visitor / staff action	Where it lives	What happens next
Get Involved form	Admin → Enquiries (follow-up queue)	Telegram + email alert; staff reply and close
Subscribe on Home/Events	Admin → Subscribers	Welcome email to visitor + staff alert
Create / review post	Admin → Create post / Content library	Publish only by Admin/Owner
Publish upcoming event	Admin → Events + subscriber inboxes	Event email to active list
Need Excel/PDF lists	Admin → Reports	Enquiries and Subscribers export

8. Scheduled automation reminders (new)

In addition to instant alerts, BCC now has three scheduled helpers that run automatically in the background — no action required from staff. They keep the team on top of open cases, community growth, and subscriber engagement.

How scheduled helpers work

Unlike the four instant-alert workflows (which fire the moment someone submits a form), these three run on a clock. They quietly check the website's live data and only send a message when something actually needs attention.

A) Enquiry follow-up reminder — daily nudge

	When it runs Every day at 9:00 am Perth time, automatically.
	What it checks Are there any open enquiries that have been waiting for 3 or more days without being closed or resolved?
	If yes Sends a Telegram message to the BCC staff group with the count, the oldest waiting days, and a direct link to Admin → Enquiries.
	If no Silently does nothing. Staff will not receive a message on days when all enquiries are up to date.

Why this matters

Community members who filled in Get Involved deserve a response within a reasonable time. This reminder makes sure no enquiry accidentally falls through the cracks, especially after a busy period.

B) Monthly summary report — committee overview

	When it runs On the 1st of every month, automatically.
	What it sends A formatted email to bccwacharity@gmail.com with: open enquiries count, stale cases, cases closed this month, active subscribers, new subscribers this month, and the date of the last published event.
	Who receives it The bccwacharity@gmail.com staff inbox — useful for committee reports or monthly reviews.
	No action needed It runs and emails without anyone pressing anything.

C) Subscriber re-engagement nudge — weekly check

	When it runs Every Monday at 9:00 am Perth time, automatically.
	What it checks Does BCC have active subscribers on the mailing list, AND has no event been published in the last 30 days?
	If yes Sends a Telegram message to staff reminding them to publish a new event or community update so subscribers stay engaged.
	If no Silently does nothing — skips the message if an event was published recently or if there are no active subscribers.

Simple rule for staff

These three reminders are read-only advisors. They never send anything to visitors or subscribers — only to the BCC staff Telegram group or Gmail. Staff still decide every action themselves.

Summary of all seven automations

Workflow	Fires when	Goes to
Inquiry Alert	Someone submits Get Involved (or status changes)	Staff Telegram + Gmail
Subscribe Alert	Someone joins the mailing list	Staff Telegram + Gmail; welcome email to visitor
Event Mail	Upcoming event first published	Active subscribers + staff Telegram
Publish Distribution	Post published by Admin/Owner	Configured distribution steps
Enquiry Follow-up Reminder	Daily 9 am — if open enquiries 3+ days old	Staff Telegram only
Monthly Summary Report	1st of each month	Staff Gmail (bccwacharity@gmail.com)
Subscriber Re-engagement Nudge	Every Monday 9 am — if 30+ days since last event	Staff Telegram only

9. Website safety and security

The BCC website is designed with security built in at every level. This section explains what protections are in place, in everyday language.

Short answer: Yes, the website is safe

Community contact details, subscriber lists, enquiry records, and admin logins are all protected and never visible to the public. The padlock icon and https:// in your browser confirm every page is encrypted.

What protects visitors

Protection	What it means in plain language
HTTPS / SSL (padlock)	All information sent between a visitor's browser and the website is encrypted. No one in the middle can read it.
Secure contact form	Get Involved messages go directly to the Admin Panel — not to a public inbox anyone can see.
Consent before subscribe	Nobody is added to the mailing list without ticking a consent box first.
No public profiles	Visitors' names and emails are never shown on the public website. Only authorised staff can access the list.

What protects the Admin Panel

Protection	What it means in plain language
Login required	The Admin Panel is password protected. No member of the public can enter it.
Role-based access	Editors, Administrators, and Owner each see only what their role allows. Editors cannot open subscriber or enquiry lists.
Session security	Admin sessions time out. The website blocks login attempts from outside the normal trusted path.
Webhook secrets	Automation signals between the website and n8n are signed with a private code. Fake signals are rejected.
No source maps	The website code visible in a browser is minified and unreadable. The original source code is never exposed.

Security headers active on every page

- **Strict HTTPS** — browsers are instructed never to load the site over plain HTTP.
- **No framing allowed** — the site cannot be embedded inside another website to trick visitors (clickjacking blocked).
- **Content policy** — only BCC's own scripts and images can load. Third-party injections are blocked.
- **No camera or microphone access** — the website is not permitted to request device sensors.
- **No MIME-type tricks** — browsers cannot be misled about what type of file is being served.

What cannot be hidden on any public website

On every website in the world, the public design (colours, layout, text on public pages) can be viewed in a browser. This is the nature of the internet. What matters is that BCC's real assets — member records, staff logins, financial figures, enquiry details — are all server-side and completely invisible to any visitor or inspector tool.

What to do if you suspect a problem

- If you see unexpected content on the public site, tell the Administrator or Owner immediately.
- If you think an admin account may have been accessed without permission, the Owner can reset that staff member's password.
- Never share your admin password by chat or email.
- Contact the Owner if the HTTPS padlock ever disappears from the browser bar.

10. Everyday checklist for helpers

- Check Telegram / staff email for new Get Involved messages and new subscribers.
- Work the follow-up queue until cases are closed — the daily 9 am reminder will nudge you if any case is 3+ days old.
- Keep drafts private until reviewed.
- Only publish events and posts when the information is correct.
- Publish a new event or update at least once a month — the weekly re-engagement reminder will prompt you if subscribers have heard nothing in 30 days.
- Direct public contact to Get Involved — not personal chat alone — so the community record stays complete.
- On the 1st of each month, check the summary email to bccwacharity@gmail.com for a quick overview of cases and subscribers.

For questions about how automation connects behind the scenes, read Guide 2: System Design & Automation (Plain Language).
